

# Perifix<sup>®</sup> FX Springwound Epidural Catheter

Designed to enhance patient comfort and minimize risks of complications

Easy placement, reduced chance of vascular placement and paresthesia, and optimized drug spread.

# Closed.

# Open.

## Closed-tip multi-port or open-tip uniport.

Perifix® FX Springwound Epidural Catheter is available both ways. It's your choice.

### Advantages of Perifix FX design:

- Minimizes risk of vessel puncture, intrathecal placement and paresthesia
- Easy to advance and remove
- Consistent, reproducible feel
- Optimal drug spread

With an inner spring embedded in polyamide nylon, the Perifix FX catheter provides the ideal balance of softness and stability.

**The result?** Safe and more accurate insertions that benefit patients and anesthesiologists alike.

## Springwound Epidural Catheter

With an inner **spring embedded** in a special formulation of polyamide nylon, the Perifix FX catheter provides the ideal balance of softness and stability.

**The result?** A design intended to provide safer, more accurate insertions that benefit patients and anesthesiologists alike. And it's available in a closed-tip multi-port or open-tip uni-port design — it's your choice!

### Perifix FX design advantages:

- Minimizes risk of vessel puncture, intrathecal placement and paresthesia
- Easy to advance and remove
- Consistent, reproducible feel
- Optimal drug spread

**The bottom line?** Our advanced springwound epidural catheters are designed to enable easier insertion, enhanced patient comfort and minimized risk of vessel puncture and paresthesia.

READ WHAT USERS THINK ABOUT THE PERIFIX FX AT [www.perifixfx.bbraunusa.com/FX](http://www.perifixfx.bbraunusa.com/FX)

Flashback windows (distal and proximal) for easy visualization of blood or CSF upon aspiration

Easy insertion and removal with reduced possibility of breakage or uncoiling with the spring embedded in polyamide

Easy advancement to minimize the incidence of catheter repositioning for better analgesia quality

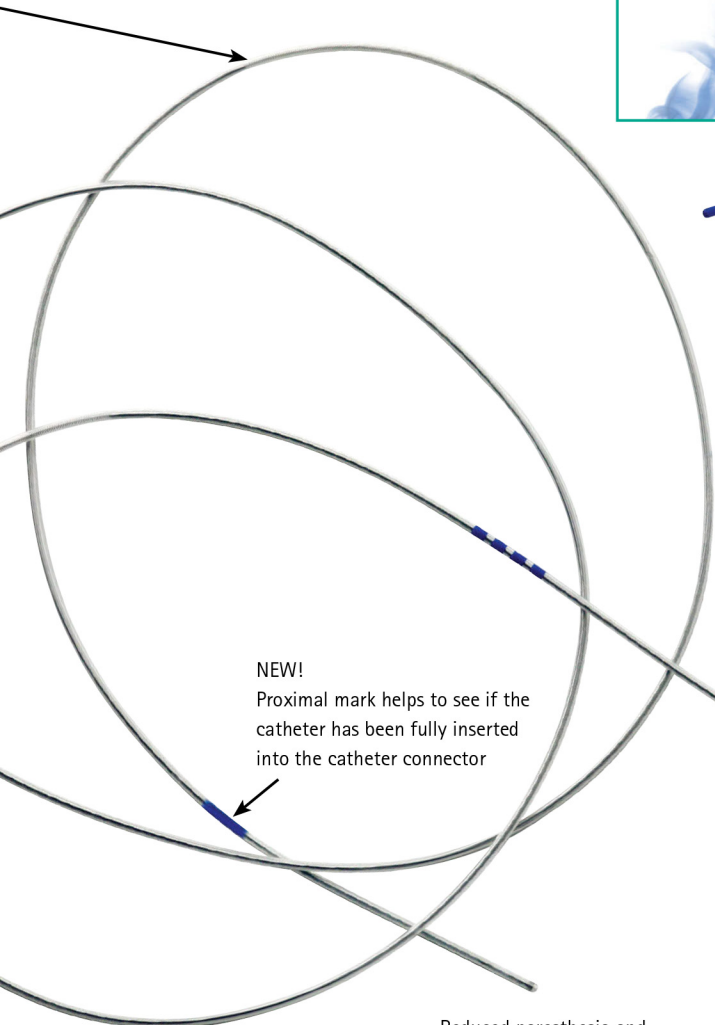

Centimeter markings

Transition from rigid body to flexible tip

Closed-tip, multi-port design with three lateral holes for optimal drug spread, fewer unilateral blocks and a potentially higher detection rate of intravascular catheter placement

NEW!  
Proximal mark helps to see if the catheter has been fully inserted into the catheter connector

Thread assist guide for increased catheter stability while threading

Also available in an open-tip, uni-port design

Reduced paresthesia and vessel puncture with a soft and atraumatic distal tip design

Consistent feel and performance with minimal variation in tip deflection

## Springwound Epidural Catheter Options

Custom  
Trays Only

### Need springwound catheter options?

If your daily practice requires just a little extra precision, and you are an existing B. Braun Custom Tray customer or want to become one, we are happy to offer you two Perifix FX Epidural Springwound Catheter options.

Both options provide the advantages of our well-known Perifix FX Catheter and include additional features to help improve procedural outcomes.

#### Perifix FX with dispensing coil

- Easy handling and threadability
- Reduced chance of catheter leaving the sterile field
- Available in closed-tip, multi-port and open-tip, uni-port design

#### Perifix FX with metal stylet\*

- Easy threading and steerability while maintaining the flexibility of the distal 5cm for a very flexible, atraumatic tip
- Available in closed-tip, multi-port and open-tip, uni-port design

\* Stylet needs to be removed after successful catheter placement
